General Comment

AI confuses people because the phrase indicates some type of decision making that is human in nature. That's not the case at all. AI is a computer program. It could be made up of smaller programs that interact in a fashion that the programmer has designed. Yet, nevertheless, underneath it all, it is a computer program.

Therefore, "AI" should be examined just like any other computer program or algorithm. No new rules should be created for a computer program or method that claims AI.
