Subject: The Impact of Artificial Intelligence on Intellectual Property Law

Greetings,

Please do not recognize Artificial Intelligence "A.I." property rights. The people who built the programs should retain the royalties, or otherwise take responsibility for their creation. To give the A.I. property rights would be to relieve the creators of liability. How can you hold A.I. accountable for crimes against humanity? It is the people who make them who are responsible.

The evil people in this world want to give rights to mountains, lakes, and yes, A.I.. This is not to protect the mountains, lakes, or A.I.. They literally want to take away our Natural Rights. This is an attempt to undermine humanity in a very serious way. Do not fall for it.

Thank you,
Mary Altmann
