Subject: AI Inventor Advice

Hello USPTO,

As an inventor and technologist, Thank you for doing all that you do.

With regard to "AI" or advanced Machine Learning programs finding new and useful innovations, I find the solution is quite simple, and it appears you have found it already.

The USPTO should keep a pulse on the speed at which "AI" is becoming autonomous enough to lose attribution from a set of human inventors. If this is happening, ethics should be deeply considered before deciding whether the company owning the AI receives exclusive rights to the invention, or if the inventions are attributed elsewhere in a fashion that **STILL MOTIVATES COMPANIES TO CREATE THEM *ETHICALLY*** i.e. with security for the general public and the future of humanity).

It would be a pleasure to work on this problem with you.

--

Sincerely,

Pierce Mooney
