Subject: stop the madness

Please, please, please stop issuing software patents. You are killing
innovation, entrepreneurs and fundamentally violating the reason why
you exist.   The patent system simply does not work for software.
Stop. Please.

As a software entrepreneur I run a company that has raised over 6
million dollars and has many millions in revenue only because of our
software innovation . The patent system is a danger, a cost, and a
risk to me rather then a protection.   You are hurting me, my business
and the business of everyone I know in the software industry.

Thanks
Zach
