21	VELOCITY OR VELOCITY/HEIGHT	68	.Lamp attachments
2.0	MEASURING	69	CUTTING BLADE SHARPNESS
28	.With light detector (e.g.,	70	OIL TESTING (E.G., CONTAMINATION)
	photocell)	71	DOCUMENT PATTERN ANALYSIS OR
28.5	Of light interference (e.g.,		VERIFICATION
	interferometer)	72	WITH PLURAL DIVERSE TEST OR ART
29	OPTICAL ELEMENT OR RETICLE	73	PLURAL TEST
	RESPONDS TO RELATIVE VELOCITY	73.1	FOR OPTICAL FIBER OR WAVEGUIDE
	OF REMOTE OBJECT		INSPECTION
30	CRYSTAL OR GEM EXAMINATION	300	BY DISPERSED LIGHT SPECTROSCOPY
31	.Axes determination	301	.With Raman type light scattering
32	MATERIAL STRAIN ANALYSIS	302	.For spectrographic (i.e.,
33	.With polarized light		photographic) investigation
34	Attached detector	303	With spectral analysis
35	Sheet material	304	With sectored disc
35.5	.By light interference detector	305	With diffraction grating
	(e.g., interferometer)	306	.With internal standard
36	WITH SAMPLE PREPARATION		comparison
37	.Condensation nuclei detector	307	.With background radiation
38	.Depositing particles on optical		comparison
	surface	308	.With synchronized spectrum
39	BLOOD ANALYSIS	3 3 3	repetitive scanning (e.g.,
40	.Hemoglobin concentration		cathode-ray readout)
41	Oximeters	309	Using plural beams
42	Standards	310	.With aperture mask
43	OPTICAL PYROMETERS	311	.With sample excitation (e.g.,
44	.With sample engaging rod or tube	311	burning)
45	.Plural color responsive	312	By electrical resistance
46	.With incandescent standard	312	heating (e.g., graphite tube)
47	Automatic intensity control	313	
48	-	314	By arc or spark
_	Modulating (e.g., flicker beam)	_	Including sputtering
49	Telescopic	315	By flame
50	Current control	316	By high frequency field (e.g.,
51	INFRARED AND ULTRAVIOLET	245	plasma discharge)
52	EGG CANDLING	317	By light
53	.Photoelectric	318	Monochromatic (e.g., laser)
54	.With counting, marking, or	319	.Utilizing a spectrophotometer
	weighing		(i.e., plural beam)
55	.With egg transfer	320	Having plural wavelengths
56	With egg turning or jarring	321	Having servo equalization
57	Endless conveyor	322	With polarized light beams
58	Endless conveyor	323	Having beam modulation
59	Manual transfer	324	With plural dispersion
60	With light shading chamber	325	Prior to testing
61	Portable receptacles	326	.Utilizing a spectrometer
62	.With light shading chamber	327	Having light polarizing means
63	Hood type		<del>-</del>

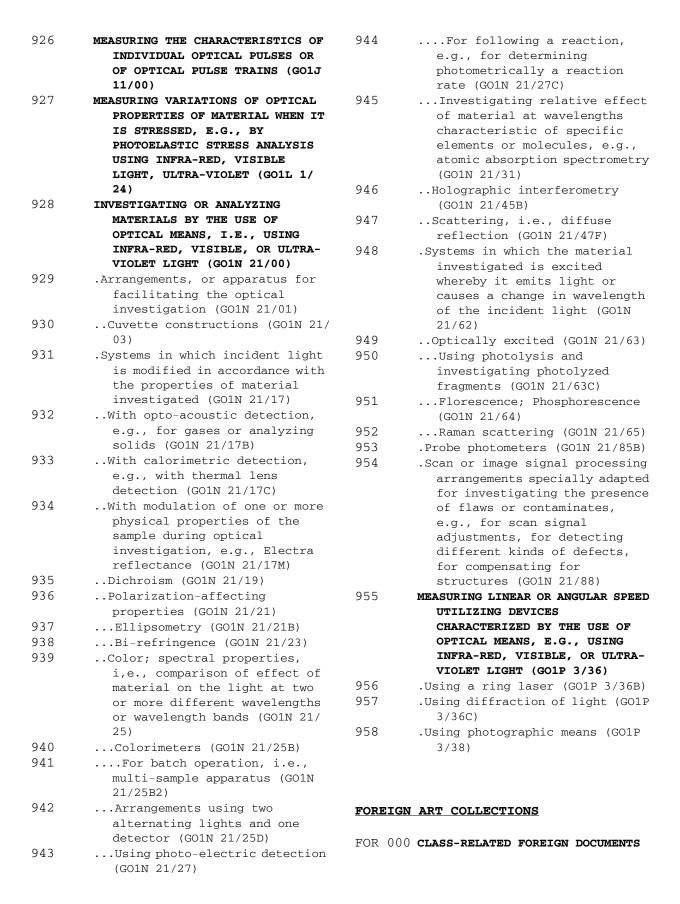

328	Having diffraction grating means	470	Passive cavity (laser source outside cavity)
329	Including servo slit	471	Multi-axis cavity
	adjustment means	472	Lock-in prevention
330	Having optical gating means	473	Path length control (PLC)
331	.With monochromator structure	474	Having dither signal removal
332	Having adjustable color or		from output
	bandwidth	475	Having dither signal control
333	In a double monochromator	476	By dithering (suspensions,
334	With diffraction grating means		drives, flexures)
335	FOR SIZE OF PARTICLES	477	.Using fiber or waveguide
336	.By particle light scattering		interferometer
337	BY PARTICLE LIGHT SCATTERING	478	Multiplexed sensor array
338	.With photocell detection	479	Having a short coherence length
339	At right angles to the light		source
	beam (e.g., nephelometer)	480	Resonant cavity
340	At variable angle to the light	481	Refraction indexing
	beam	482	For distance or displacement
341	For light comparison means		measurement
342	Of back-scattered light	483	Plural counter-propagating
343	Using plural photocells		beams (e.g., non-motion Sagnac
344	BY ELECTROPHORESIS		device)
450	BY LIGHT INTERFERENCE (E.G.,	484	.Having light beams of different
	INTERFEROMETER)		frequencies (e.g.,
451	.Spectroscopy		heterodyning)
452	Having particular linear mirror	485	For dimensional measurement
	drive or configuration		(e.g., thickness gap,
453	Polarization		alignment, profile)
454	Fabry-Perot type or Etalon Type	486	Displacement or distance
455	Having a rotating, pendulous,	487	Polarization
	or wedge scanning element	488	Having wavefront division
456	Imaging	400	(e.g., by diffraction)
457	.Holography	489	Contour or profile
458	For optical configuration	490	Alignment
459	.Rotation rate (e.g., ring laser	491	.Having polarization
	gyros)	492	For dimensional measurement
460	By fiber or waveguide	493	Displacement or distance
	interferometer (e.g., Sagnac	494	Having wavefront division
	effect)	405	(e.g., by diffraction)
461	Resonant loop	495	Contour or profile
462	Multi-axis (X-Y-Z) having	496	.For dimensional measurement
4.60	multiplexing	497	Having short coherence length
463	Multiple harmonic output	400	source
464	Having null feedback loop	498	Displacement or distance
465	Fiber coil winding	499	Having wavefront division
466	Having m x n loop coupler	500	<pre>(e.g., by diffraction)X-Y and/or Z table</pre>
	where (m is greater than 2)	501	
	and (n is greater than or	301	<pre>Of probe head (e.g., atomic force microscope)</pre>
	equal to 2) (e.g., passive bias)	502	
467	Four frequency, multi-	JUZ	Surface displacement due to acoustic wave propagation)
40/	oscillator, non-planar cavity	503	Thickness
468	Cavity output beam combiner	504	Refraction from surfaces of
469	Cavity output beam combinerCavity mirror details	J U ±	different refractive index
100	cavicy millor accards	505	Gap
		555	

506	Fabru Darat time	137	Dlumal prigma
507	Fabry-Perot typeBetween slider/disc (e.g.,	138	Plural prisms  ANGLE MEASURING OR ANGULAR AXIAL
307	flying height)	130	ALIGNMENT
508	For orientation or alignment	139	.Plural scales or different
509	Between mask and wafer	137	portions of same scale
			simultaneously observable
510	Tilt	120 01	_
511	Contour or profile	139.01	.Star/Sun/Satellite position
512	By wavefront detection	100.00	indication with photodetection
513	Of highly reflective surface	139.02	With reticle or slot
	(e.g., mirror)	139.03	.Relative attitude indication
514	Planar surface		along 3 axes with
515	Of transmission (e.g., lens)		photodetection
516	Step height (differential,	139.04	.Automatic following or aligning
	between points)		while indicating measurement
517	.For refractive indexing	139.05	With optical elements moving
518	Having Schlieren effect		relative to fixed housing to
519	.Having partially reflecting		follow or align
	plates in series (e.g., Fabry-	139.06	With optical housing moving to
	Perot type)		follow or align
520	.Having shearing	139.07	With photodetection of
521	.Having wavefront division (by		reflected beam angle with
JZ1	diffraction)		respect to a unidirectional
364	BY POLARIZED LIGHT EXAMINATION		source beam
365	.With birefringent element	139.08	With source beam moving to
	3		follow or align
366	.With polariscopes	139.09	.Wheel alignment with
367	Including polarimeters	133.03	photodetection
368	With electro-optical light	139.1	.Photodetection of inclination
	rotation	137.1	from level or vertical
369	.Of surface reflection	140	.Apex of angle at observing or
370	.With light attenuation	140	detecting station
121	LAMP BEAM DIRECTION OR PATTERN	141.1	-
122	.With lamp focusing	141.1	With photodetection of
123	FOCAL POSITION OF LIGHT SOURCE		reflected beam angle with
124	LENS OR REFLECTIVE IMAGE FORMER		respect to a unidirectional source beam
	TESTING	141.2	With photodetection
124.5	.For optical transfer function		-
125	.Focal length measuring	141.3	With unidirectional or planar
126	Deflecting or interrupting		source beam directed at the
	optical path	444	photodetecting station
127	Optical center, cylinder axis,	141.4	With optical scanning of light
	or prism measuring or		beam or detector
	determining	141.5	With at least 2-dimensional
128	REFRACTION TESTING (E.G.,		sensitivity
120	REFRACTOMETERS)	142	Scale and remote point
129	.Schlieren effect		simultaneously observable
130	.Differential	143	Artificial reference
131		144	With plural images
131	With servo controlled optical member	145	Lines of sight relatively
122			adjustable with two degrees of
132	Reflective optical member		freedom
133	Refractive rod engages specimen	146	Two or more lines of sight
134	.Prism forming fluid specimen		deflected
	container	147	Measurement in two planes
135	.Prism engaging specimen		(e.g., azimuth and elevation;
136	Internally reflecting prism		hour angle and declination)
			=

148	Artificial reference	627	.Volume
149	Gyroscope or pendulum	628	.Area
	stabilized optical element	629	Light scanning
150	.Sides of angle or axes being	630	.Thickness
	aligned transverse to optical	631	By triangulation
	axis (e.g., drift meter)	632	Of light permeable material
151	With light pulsing or	634	.Length
	interrupting means	635	.Width or diameter
152.1	.With photodetection remote from	636	Line width
	measured angle	637	Web
152.2	With reflection of a	638	Shadow or beam blocking
	unidirectional source beam	639	Scanning
	from a planar or	640	Single beam scans entire
	nonretroreflective surface		width or diameter
152.3	With reflection of a	388	BY CONFIGURATION COMPARISON
	unidirectional source beam	389	.With photosensitive film or
	from a retroreflector	303	plate
153	.Alignment of axes nominally	390	.With two images of single
	coaxial	330	article compared
154	.With screen	391	.With projection on viewing
155	Wheel alignment	331	screen
600	SURFACE ROUGHNESS	392	For comparison with master or
601	SHAPE OR SURFACE CONFIGURATION	3,72	desired configuration
602	.Triangulation	393	Having master or desired
603	Projection of structured light	333	configuration projection
	pattern	394	.With comparison to master,
604	Pattern is series of non-	374	desired shape, or reference
	intersecting lines		voltage
605	Moire	395	.With relatively movable optical
606	Line of light projected	333	grids
607	Scan	396	.With scale or optical grid
608	Scan	370	displaced relative to remote
609	.By focus detection		fiducial mark
610	.By projection of coded pattern	397	.With object being compared and
611	.By stereo	351	scale superimposed
612	.By specular reflection	398	.With object being compared and
613	.Silhouette	390	light beam moved relative to
614	POSITION OR DISPLACEMENT		each other (e.g., scanning)
615	.Position transverse to viewing	399	BY ALIGNMENT IN LATERAL DIRECTION
013	axis	400	.With light detector (e.g.,
616	Having scale or grid	400	photocell)
617	Coded scale	401	-
	Coded scale	401	.With registration indicia (e.g.,
618		402	scale)  BY SHADE OR COLOR
619	Quadrature detection	402	
620	Special mark or target on object	403	.With merging colors or patterns (e.g., Maxwell disc)
621	Occulting a projected light	404	.Photography
	beam	405	.Tristimulus examination
622	Position of detected	406	.Trichromatic examination
	arrangement relative to	407	.With sample responsive to plural
	projected beam		colors applied simultaneously
623	.Triangulation	408	.With sequential comparison of
624	.Focus		sample and standard
625	DIMENSION	409	.Fluid color transmission
626	.Cavities		examination

410		014	D '11
410	Of flowing liquids	214	Pupillary
411	With plural light detectors	215	.Integrating
44.0	(e.g., photocells)	216	.Heat absorbing (e.g.,
412	With ionic determination		radiometers)
413	With variable light path length	217	.Modulating (e.g., flicker beam)
414	With color transmitting filter	218	.Photoelectric
415	Including liquid filter	219	Simultaneous sighting and
	comparison		reading measurement
416	.With color transmitting filter	220	Multiple housings
417	Included with sample excitation	221	Responsive to incident or back
418	Including rotating sequential		lighting
	filters	222	Plural detectors
419	Including multicolor filters	223	Logarithmic
420	Included with colored light	224	Multisensitivity range
	sources	225	With predetector light modifier
421	.With reflective multicolor chart		(e.g., diaphragm)
	or standard	226	Detector and indicator
422	Plate		electrical coupling (e.g.,
423	Disk		amplifying or attenuating)
424	Drum or endless tape	227	With particular indicator
425	.With color determination by	228	Movable scale (e.g.,
	light intensity comparison		calibrating)
426	BY INSPECTION WITH AGITATION OR	229	.Comparison
	ROTATION	230	With light standard
427	.Of container contents	231	Variable incandescent standard
428	.Of containers	232	Standard movable
429	BY MONITORING OF WEBS OR THREAD	233	.With variable light aperture
430	.For flaws or imperfections		size
431	Including transverse scanning	234	.Light absorbing
432	FOR LIGHT TRANSMISSION OR	235	Absorber continuously variable
	ABSORPTION		(e.g., wedge)
433	.By comparison	236	.Integrating spheres
434	Photoelectric (e.g., sequential	237.1	INSPECTION OF FLAWS OR IMPURITIES

		223	DIFFERENCE: MEASURING OPTICAL WAVELENGTH (GO1J 9/00)
			,,

Any foreign patents or non-patent literature from subclasses that have been reclassified have been transferred directly to FOR Collections listed below. These Collections contain ONLY foreign patents or non-patent literature. The parenthetical references in the Collection titles refer to the abolished subclasses from which these Collections were derived.

## FOR 100 INSPECTION FOR FLAWS OR IMPERFECTIONS (356/237)

- FOR 101 .Cloth or thread inspection (356/
- FOR 102 .Passing light through a transparent or translucent article (356/239)
- FOR 103 ..Containers (e.g., bottles) or contents (356/240)
- FOR 104 .Bore inspection (e.g., borescopes) (356/241)
- FOR 105 THREAD COUNTING (356/242)
- FOR 106 STANDARDS (356/243)
- FOR 107 BY LIGHT INTERFERENCE (E.G., INTERFEROMETERS) (356/345)
- FOR 108 .Spectroscopy (356/346)
- FOR 109 .Holography (356/347)
- FOR 110 .. For optical configuration (356/ 348)
- FOR 111 .With light beams of different frequency (e.g., heterodyning) (356/349)
- FOR 112 .. For rotation rate (e.g., ring laser) (356/350)
- FOR 113 .With polarization (356/351)
- FOR 114 .With partially reflecting plates in series (e.g., Fabry-Perot type) (356/352)
- FOR 115 .With shearing (356/353)
- FOR 116 .With wavefront division (e.g., by diffraction) (356/354)
- FOR 117 ..For dimensional measurement (e.g., thickness) (356/355)
- FOR 118 ...Of displacement or distance (356/356)
- FOR 119 .For dimensional measurement (e.g., thickness) (356/357)
- FOR 120 .. Of displacement or distance (356/358)
- FOR 121 .For optical configuration (356/ 359)
- FOR 122 ..With two light beams (e.g., Twyman-Green) (356/360)

- FOR 123 .For refractive indexing (356/ 361)
- FOR 124 .. With Schlieren effect (356/362)
- FOR 125 .For orientation and alignment (356/363)
- FOR 126 FOR FLATNESS (356/371)
- FOR 127 BY MENSURATION (356/372)
- FOR 128 .Of article displacement (356/ 373)
- FOR 129 ..Including moire' fringe (356/ 374)
- FOR 130 .Of position (356/375)
- FOR 131 .Of contour or profile (356/376)
- FOR 132 .. With curve readers (356/377)
- FOR 133 .Of cavities (356/378)
- FOR 134 .Of area or volume (356/379)
- FOR 135 .. By scanning (356/380)
- FOR 136 .Of thickness (356/381)
- FOR 137 .. Of light permeable material (356/382)
- FOR 138 .Of length (356/383)
- FOR 139 .Of width or diameter (356/384)
- FOR 140 .. Of moving object (356/385)
- FOR 141 ...By scanning or light interruption (356/386)
- FOR 142 ..By scanning or light interruption (356/387)
